1. Unboxing Your Assembled Printrbot Plus

Written By: Printrbot Support

Step 1 — 1. Unboxing Your Assembled Printrbot Plus

- Congratulations on receiving you new Printrbot Plus!

- ⊠ Please visit **printrbot.com/plus** for getting started resources, downloads, and other helpful info.

- Remove the foam packaging to gain access to the accessory box.

- Once the accessory box has been removed from the box, pull your Printrbot Plus out of the box by grabbing the top base with both hands.

Step 2

- Open up the accessory box and remove the Power Tower. Find the following:
  - Wooden wrenches (x2)
  - Delrin plastic test square
  - Micro-USB cable
  - Sample of PLA filament (1/4lb)
 - Power Tower w Universal Spool Rack - ATX power supply installed

⚠️ **SEE THIS GUIDE** before using your power supply. Make sure that you have selected the correct 115/230 voltage for your country.
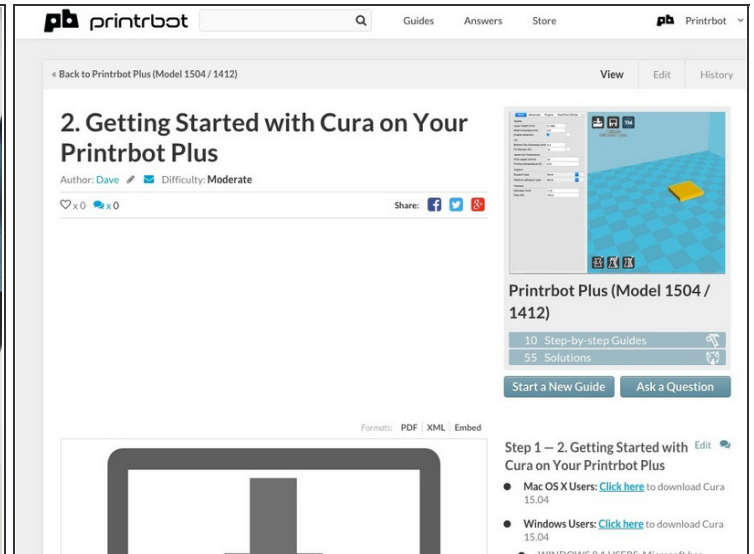

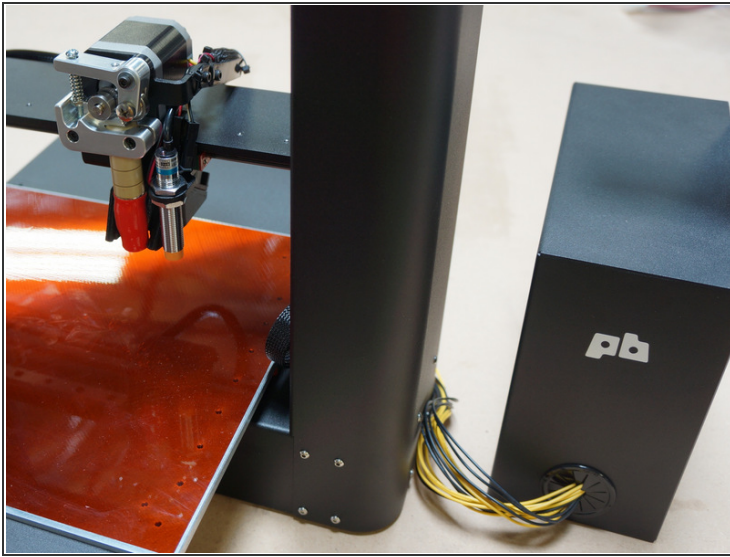

Step 3

- Remove the protective plastic wrap from your Printrbot Plus.
- Cut the zip tie on the extruder to set it free.

Step 4

- **Single Extruder/Heated Bed Users**: Depending on when your Plus was manufactured, you may have a 4-pin or 6-pin power connector on your Plus. Find the matching connector on your ATX power supply and plug bot in. DO NOT FORCE a 4-pin connector into a 6-pin harness or vice versa. You can also plug the micro-USB cable into the USB port.

- **Dual Extruder Users**: Connect the 4-pin connector from your ATX power supply to the 4-pin power harness on your bot. Connect the 6-pin connector from your ATX power supply to the 6-pin power harness on your bot. You can also plug the micro-USB cable into the USB port.

- *(i) TIP: To maintain your Printrbot, we recommend greasing the Y axis rails every 1-2 months. Tri-Flow Superior Lubricant is a satisfactory product for this.*

Step 5

- Missing something? Let us know at Printrbot.com/Support.

- **NEXT STEPS:**
  - Download Cura version 15.04. This is the software that you will use to communicate with your Printrbot Play.
    - **Mac OS X Users: Click here** to download Cura 15.04
    - **Windows Users: Click here** to download Cura 15.04
  - See Getting Started with Cura on Your Printrbot Plus
